Impact of the manosphere on attitudes, beliefs and conceptions about gender violence in adolescence in Úbeda

This project aims to ***analyze the access of adolescents in the municipality of Úbeda to harmful digital content related to the manosphere*** and evaluate its impact on the development of attitudes, beliefs, and perceptions related to gender-based violence. To this end, the project will identify the degree of exposure of adolescents to digital content associated with the manosphere; evaluate the relationship between this consumption and the emergence of gender biases and attitudes toward gender-based violence; explore how misogynistic discourses are integrated and normalized on digital platforms used by young people; and propose prevention strategies based on critical digital literacy and equality education. This will be carried out in two phases: first, a quantitative analysis using a questionnaire as an assessment tool; and second, a qualitative analysis through focus groups.
