

CBUA: New EBSCO Features Powered by Artificial Intelligence to Optimize Scientific Research

28/10/2026

Students working

This session is intended for individuals involved in scientific research, as well as master's students interested in improving their strategies for searching for academic information. Throughout the training, we will present the new features of EBSCOhost that incorporate artificial intelligence to support the research process and facilitate access to evidence-based information. We will demonstrate how these tools enable users to optimize searches, discover relevant content more efficiently, and refine results in the major databases available at the University. The session will offer a practical overview of how to leverage EBSCOhost as a key resource for locating and managing high-quality scientific literature. Upon registration, you will receive an email with an event invitation that you can add to your calendar.

Date and time: 3 nov 2026 13:00.

Duration: 45 minutos.
