TEP-101 Research & Development in Solar Energy

Coordinator: Dr. Jorge Aguilera Tejero (aguilera [arroba] ujaen [punto] es)

The “Research & Development in Solar Energy” group focuses its activity on photovoltaic systems engineering, both those connected to the grid and standalone systems.

Website for the group

Website for the Research & Development in Solar Energy Research Group

Research lines

- Characterization and modeling of photovoltaic modules: crystalline silicon, thin film, bifacial and concentration
- Photovoltaic systems engineering: Large plants and photovoltaic integration

Related services and products

- Expert controller of standalone photovoltaic systems
- Integrated solar radiation and ambient temperature sensor
- Procedure for protecting against electric shock in human beings
- Light beam concentration system
- Solar monitoring procedure
- Electronic trekking pole
